BRAND NEW, Sustainable Critical Infrastructure Systems: A Framework for Meeting 21st Century Imperatives, Toward Sustainable Critical Infrastructure Systems: Framing the Challenges Workshop Committee, Board on Infrastructure and the Constructed Environment, Division on Engineering and Physical Sciences, National Research Council, For the people of the United States, the 20th century was one of unprecedented population growth, economic development, and improved quality of life. The critical infrastructure systems—water, wastewater, power, transportation, and telecommunications—built in the 20th century have become so much a part of modern life that they are taken for granted. By 2030, 60 million more Americans will expect these systems to deliver essential services. Large segments and components of the nation's critical infrastructure systems are now 50 to 100 years old, and their performance and condition are deteriorating. Improvements are clearly necessary. However, approaching infrastructure renewal by continuing to use the same processes, practices, technologies, and materials that were developed in the 20th century will likely yield the same results: increasing instances of service disruptions, higher operating and repair costs, and the possibility of catastrophic, cascading failures. If the nation is to
